About Me

Technical delivery leadership grounded in hands-on software and enterprise transformation experience.

Senior Technical Project Manager with 7+ years of experience driving end-to-end delivery of enterprise applications, ERP implementations and digital transformation initiatives across manufacturing, telecom and financial-services environments.

I work at the intersection of business and technology: translating objectives into executable plans, coordinating cross-functional teams, managing risks and dependencies, and guiding initiatives through testing, release, go-live and continuous improvement.

WHAT I LEAD	HOW I WORK
• End-to-end project planning and execution • Scope, schedules, milestones and resources • RAID, dependencies, change and escalation • Stakeholder communication and governance • Release readiness, cutover and go-live	• Agile / Scrum, Waterfall and hybrid delivery • Business and technical stakeholder alignment • Structured SDLC and quality gates • Transparent reporting and decision support • Continuous improvement after launch

VALUE PROPOSITION

A project leader who can communicate with executives, business teams and engineers while maintaining enough technical depth to understand integrations, environments, data flows, testing and release dependencies.

Career Journey

Progression from enterprise technology delivery into technical project leadership.

2015 - 2022

Project Manager

Works Applications, India

Enterprise applications • Agile delivery • ERP/business processes • Financial and investment-related technology

2024 - 2026

MEng, Engineering Management

Ontario Tech University, Canada

Engineering management, project management and business/operations foundations

Mar - Aug 2026

Technical Project Manager

EXM, Canada

Microsoft Dynamics 365 • Manufacturing • Procurement • Inventory • Supply Chain • Order Management

Current Focus

Technical Project / Delivery Leadership

ERP • Digital transformation • Financial-services technology • Agile delivery

Core Delivery Expertise

A portfolio spanning project governance, Agile delivery, ERP transformation and technical coordination.

PROJECT MANAGEMENT • End-to-end project delivery • Project planning and execution • Scope and schedule management • Resource and budget tracking • Milestone and delivery tracking • Risk, issue and RAID management • Dependency and change management • Project governance and reporting	AGILE, SCRUM & SDLC • Sprint planning and backlog management • Backlog refinement and user stories • Sprint reviews and retrospectives • Scrum metrics and velocity tracking • Release planning and UAT management • Deployment and go-live management • Production support • Continuous improvement
STAKEHOLDER & BUSINESS • Executive stakeholder management • Cross-functional team leadership • Vendor and client management • Requirements gathering • Business analysis and process mapping • Steering committee reporting • Escalation and decision management	ERP & TRANSFORMATION • Microsoft Dynamics 365 • Procurement and inventory • Supply chain and order management • System integration • Workflow optimization • Release readiness and cutover • Post-implementation support

Microsoft Dynamics 365 ERP Implementation

Manufacturing operations | Procurement | Inventory | Supply Chain | Order Management

ROLE • Technical Project Manager, EXM, Canada | Mar 2026 - Aug 2026

BUSINESS CONTEXT	MY RESPONSIBILITY
- Enterprise ERP implementation supporting manufacturing operations - Business processes spanning procurement, inventory, supply chain and order management - Integration with enterprise applications for data exchange and process continuity	- Project planning, scope, timelines and milestones - Resource coordination and delivery tracking - Risk, issue and dependency management - Business / technical stakeholder coordination - UAT, release readiness, cutover and go-live

DELIVERY APPROACH

1	2	3	4	5	6
Requirements & workflows	Planning & dependencies	Build / integration coordination	UAT & defect resolution	Release readiness & cutover	Go-live & post-production

KEY CONTRIBUTIONS

- Led collaboration among business stakeholders, technical teams, developers, QA and operational users to align requirements and workflows.
- Coordinated ERP integrations with enterprise applications to support data exchange, automation and operational continuity.
- Managed UAT planning, requirements validation, defect tracking, issue resolution and business sign-off.
- Coordinated deployment readiness, cutover and go-live while resolving implementation issues across business and technology teams.
- Maintained delivery visibility through milestone tracking, RAID management, status reporting and delivery reviews.
- Supported post-production incident resolution, enhancements and continuous improvement.

Enterprise Agile & Digital Transformation Delivery

Cross-functional enterprise delivery across business, development, QA, DevOps, vendors and clients.

ROLE • Project Manager, Works Applications, India | Jun 2015 - Apr 2022

DELIVERY SCOPE	AGILE LEADERSHIP
• Multiple enterprise application workstreams • Finance, Procurement, Inventory and Supply Chain stakeholders • Requirements through production support • System integrations and application enhancements • Teams of 10-20 members	• Sprint planning and daily stand-ups • Backlog refinement • Sprint reviews and retrospectives • Stakeholder discussions • Cross-functional dependency management

MEASURABLE DELIVERY OUTCOMES

20%	12%	22%	98%
Improved delivery predictability	Increased release efficiency	Reduced dependency-related delays	Stakeholder satisfaction

HOW THE RESULTS WERE SUPPORTED

- Structured Agile governance and enhanced tracking to improve predictability.
- Improved deployment coordination and release readiness to increase release efficiency.
- Proactive identification, tracking, escalation and resolution of blockers to reduce dependency delays.
- Transparent communication, governance and timely delivery management to support stakeholder satisfaction.

Financial Services Technology Delivery

Enterprise application delivery supporting financial and investment-related technology.

ROLE • Project Manager, Works Applications

The resume supports exposure to financial and investment-related enterprise applications, with coordination across transaction workflows, system integrations, data processing, testing and production releases.

DELIVERY FOCUS	DOMAIN EXPOSURE
• Transaction workflows • System integrations • Data processing • SIT and UAT coordination • Production releases	• Capital markets • Wealth management • Investment operations • Financial systems • Investment products

PROJECT MANAGEMENT CONTRIBUTION

- Coordinated business and technical stakeholders across financial and investment-related application delivery.
- Managed workstreams, dependencies, change requests, risks, escalations and delivery commitments.
- Supported requirements gathering, functional documentation, testing, release planning and production support.
- Prepared project status, milestone, risk and governance materials for leadership and steering committee reviews.

PORTFOLIO NOTE

This case study intentionally stays at the level supported by the resume and does not claim ownership of specific trading, portfolio-management or regulatory platforms not documented in the source material.

How I Drive Delivery

A practical framework for moving complex initiatives from idea to stable production.

01	ALIGN	Clarify objectives, stakeholders, scope, requirements and success criteria.
02	PLAN	Build milestones, schedule, resources, dependencies, RAID and governance cadence.
03	EXECUTE	Coordinate business, engineering, QA, DevOps and vendors; facilitate Agile delivery.
04	VALIDATE	Manage SIT/UAT, defects, requirements validation and business sign-off.
05	RELEASE	Coordinate readiness, deployment, cutover, go-live and stakeholder communications.
06	STABILIZE	Support incidents, enhancements, post-production review and continuous improvement.

Tools & Technical Fluency

Enough technical depth to connect delivery decisions with engineering realities.

DELIVERY & COLLABORATION	ENGINEERING & CLOUD
• Jira • Confluence • Azure DevOps • Microsoft Project • SharePoint • Microsoft Teams • Microsoft Excel • PowerPoint • Power BI	• Git • Jenkins • Docker • Azure • AWS • System integrations • Enterprise applications • Generative AI • Prompt engineering

TECHNICAL PROJECT MANAGEMENT LENS

- Translate business needs into delivery plans that technical teams can execute.
- Understand how integrations, data exchange, environments, testing and deployment affect project dependencies.
- Use delivery tooling and reporting to maintain visibility across milestones, risks and decisions.
- Apply Generative AI to support requirements analysis, project documentation, status reporting and risk/dependency tracking with stakeholder review and validation.

Education, Certification & Contact

A foundation combining engineering, management and Agile delivery.

EDUCATION	CERTIFICATIONS
• Master of Engineering Management Ontario Tech University, Canada Sep 2024 - Jan 2026 • Bachelor of Electronics & Communication Engineering Anna University, India Aug 2011 - Apr 2015	• Certified ScrumMaster® (CSM®) • Project Management Professional (PMP)® - In Progress / Preparation

LET'S CONNECT

I am interested in opportunities where I can lead complex technology delivery, strengthen cross-functional execution, and connect business objectives with reliable implementation.
